

Object Oriented Programming Lab

Course Code: CSE 1116

Home Assignment – 1

Solve all the problems on your own, copying will bring you 0 marks.

[Q1] Create a class named Student with the following:

[15]

- int id
- String name
- int[] marks (to store marks of 3 subjects)
- float average
- A constructor that takes id, name, and marks as input and stores them.

Inside the Student class, create two methods:

- calculateAverage(): calculates the average of the 3 subject marks.
- printDetails(): prints the ID, name, marks, and average of the student.

In the main() method:

- Create 3 student objects manually.
- Take input for each student (ID, name, and marks for 3 subjects).
- Call calculateAverage() and printDetails() for each student.

Sample Input, Output:

```
--- Student 1 ---
Enter ID: 101
Enter Name: Alice
Enter marks for 3 subjects:
75 80 90

--- Student 2 ---
Enter ID: 102
Enter Name: Bob
Enter marks for 3 subjects:
65 70 60

--- Student 3 ---
Enter ID: 103
Enter Name: Carol
Enter marks for 3 subjects:
85 90 95

Student Details:
ID: 101, Name: Alice, Marks: 75 80 90, Average: 81.67
ID: 102, Name: Bob, Marks: 65 70 60, Average: 65.00
ID: 103, Name: Carol, Marks: 85 90 95, Average: 90.00
```
