

Review Class

Summary of all the chapters

Summary of the Contents we Covered

- Application of Stack
 - ✓• Conversion infix to postfix
 - ✓• Postfix Evaluation
- Tower of Hanoi and Recursion
 - ✓• Pseudocode
 - ✓• Drawing trees
- Heap
 - ✓• Priority Queue vs Normal Queue
 - ✓• Simulation of the functions taught (as done on board)
 - Time Complexity of Heapsort
 - ✓• Max Heap as a priority queue

Summary of the Contents we Covered

- Tree – 1
 - ✓• Tree Traversals
 - ✓• Tree Height/Depth
- Tree -2,3
 - ✓• Writing statements for tree modification
 - ✓• BST functions
 - Time Complexity $h = O(\log n)$
- Graph 1
 - ✓• Basic terminologies
 - ✓• Visualizing and relating adjacency lists/matrices with adjacent vertices
 - ✓• Visualizing and linking vertex properties to arrays

Summary of the Contents we Covered

- Graph 2
 - ✓ • Running BFS and DFS(stack+recurse functions) on graphs
 - Converting scenarios into graphs
 - Example
 - 1. City and roads – connect joined locations together as vertices
 - 2. Maze – connect accessible locations together as vertices
 - 3. etc.
- Disjoint Set
 - Three functions
- Study and understand the pseudocodes – no need to memorize

**Don't Focus on the Outcome,
Enjoy the Process**

Thank You

Each and Every One Of You
