

Practice Problems

Queue

1. Implement a stack using queue.

2. Reverse the elements of a queue.

Input: $q[] = \{10, 20, 30, 40, 50, 60\}$

Output: $q[] = \{60, 50, 40, 30, 20, 10\}$

3. Sort the elements of a queue without using any extra space.

Input: $q[] = \{20, 40, 10, 60, 50, 30\}$

Output: $q[] = \{10, 20, 30, 40, 50, 60\}$

4. Given a queue $q[]$ and an integer K , remove the integer K from the queue. If multiple same elements exist, remove the first one.

Input: $q[] = \{10, 20, 30, 40, 50, 60\}$, $K = 30$

Output: $\{10, 20, 40, 50, 60\}$

Input: $q[] = \{1, 2, 3, 3\}$, $K = 3$

Output: $\{1, 2, 3\}$
